![EnsurTek - You Insure, We Enable]

KoverBI

A holistic no-code Broking system that meets all your sales, channels, webform, broker portal & operational needs in one place

About Us

EnsurTek's primary focus is to provide a solution to the age-old question in the insurance industry,
"How do we increase efficiency?"
The answer is what Ensurtek promises to deliver with its products.

Why KoverBI

Build any-line-of-product faster without coding. Eliminate the need for accessing multiple systems. Manage all operational processes in a single system.

Is KoverBI safe?

KoverBI solutions offer the highest levels of security and privacy, including multi-layered authentication and authorisation, encryption and complete auditability.

Benefits of KoverBI

- Speed to Market
- Improved Process Efficiency
- Easy to use Interfaces
- Dynamic Reporting
- Cost Effective
- Time Saving

Integrate with 3rd party
systems such as
XERO, MYOB, Claims system,
rating engine on demand

AI Chatbot
Response and support
via AI Chatbot &
Natural Language
Processing (NLP)

Product Creator
Configure Products,
User Access,
Authorisations faster

KoverBI

Usual	With KoverBI
Inundated with forms from clients & receiving information in a disparate manner; repetitive data entry	Client enters risk information via online web form
Brokers manually get renewals information, draft e-mails and send it to clients. Broker has to manually renew on due date.	Automatic pre-renewals in advance & emailed to clients. Renew automatically if policy conditions remain unchanged.
Multiple touch points with Pdfs, Word, Excel, Outlook for document management and communication	All policy related information is consolidated & managed in one place
Unable to search policy history in real time	One click for policy history
Accounts & finance managed separately and requires replicating data manually which is time consuming and error-prone	Generates real-time statement of accounts for receivables, payables, ledger and Trust Account
Clients have to call and e-mail for quote, policy, renewals, endorsement details.	All information is available through client online portal. Changes and comments are tracked within the policy saving time for brokers
Clients can only have support during office hours	After hours support is available through AI conversational chatbot via chat, voice or phone
Building a new line of product can take months	Configure an insurance product in weeks and start selling
Changes to risk questions, ratings, branding takes a long time to testing & implement	Changes can be implemented and effected immediately or schedule for specific date & time
Data is stored in an unstructured manner in disparate systems making it very challenging to analyze for decision making or forecasting	Data is stored in a structured, easy to use method for analytics, prediction, informed decision making and identifying areas for process improvements and sales growth potential
